

# Fog Generating Devices

## You can't steal what you can't see

What happens when intruders make a quick getaway before help arrives? Stock and equipment losses plus a fairly sizeable headache. By installing a fog generating device, you get an added layer of protection and could buy yourself valuable time.

### What is it?

When activated, the device releases a harmless, thick blanket of fog over the protected area. The fog cannon can be activated manually or when an intruder alarm activates.

Similar to theatrical dry ice or a smoke machine, the fog is odourless and safe to peoples' health and the environment, and doesn't taint clothing, electrical devices or food.

### How does it work?

Once triggered, the fog densely blankets the area you're protecting within 20-60 seconds to obscure visibility and disorient thieves – or flat out deter them from breaking in.

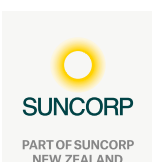

In an unventilated room the fog can remain for upwards of one hour. It's the 'you can't steal what you can't see' principle.

### Why use it?

As the fog is almost immediate, the chances of major loss are greatly diminished because thieves are stopped in their tracks within those first critical 20-60 seconds.

The device can also be operated remotely, like a panic button. So, it's incredibly useful in cases of significant threat to people and property such as an armed hold-up.
